DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to a decorative lighting apparatus, classified in class 315, subclass 185.S.
- II. Claims 13-19, drawn to a method of illuminating a decorative lighting apparatus, classified in class 315, subclass 291.
- III. Claims 20-25, drawn to a lighting connector, classified in class 439, subclass 284.

The inventions are distinct, each from the other because of the following reasons:

Inventions I & II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, Groups I & II are capable of controlling color of the lights at a predetermined rate. Group III comprises male and female interface connectors, electrical contacts, male and female pin contacts for connecting the color-controllable lights to the light strand. Therefore, Groups I & II, Group III have different functions, operation and effects.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of

Art Unit: 2821

using that product (MPEP § 806.05(h)). In the instant case, Group I comprises time-multiplexing color control and PWM current control that output a rate of 32 Hertz. On the other hand, Group II is not capable of performing this function and is constructed in a different manner. Further, Group II can be practiced with another materially different product such as digitalized control, which is different from time-multiplexing color and PWM current controls as required in Group I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

A shorten statutory period for response to this action is set to expire thirty days from the mailing date of this communication. Failure to respond within the period for response will cause the application to become abandoned.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
